

DIGITAL SERVICE RECORD

Always Connected

Honda's Digital Service Record allows you to have your service information to hand anywhere, anytime. It means less paperwork to maintain to give you more freedom in your Honda.

Our Digital Service Record is available for connected cars which have launched since 2020.

A brief overview of your service history can be seen using the VIN search from the 'Owners' section on the Honda website.

If you have a My Honda+ account, you can see your full service details, including completed service checklists.

The benefits of Digital Service Record (DSR):

Your service record is held in a centralised database for you

You can access your service history wherever you are

You no longer have to worry about losing your paper service book

DSR even tells your dealer which areas of your car require servicing, before you are in the dealership*

You can easily check recalls on your car

When it comes to selling your car, it's easy to handover the vehicle information

Future developments will see exciting new features, including optional service reminders into your My Honda+ app (where applicable)

*Requires a My Honda account and core connectivity subscription. SVRS, TCU, and Data sharing need to be turned on.
